Abstract: In recent years, more and more people have begun to pursue visual enjoyment, and the requirements for plant functions have increased a lot, and the micro-landscape just shines in sight and feeling, no matter where it is placed. They all have a low-spirited atmosphere. The effects of different green plants are also different, and they will combine their respective functions to maximize their functions.

Keywords: Micro landscape; Viewing; Function

1. Aesthetic Principles of Micro-landscape

The main feature of the micro-landscape is that it is easy to assemble by hand. The real plants and soil and artificial parts can be combined and presented in a microscopic and exquisite manner according to personal preference.

1.1. Simple material to make a beautiful height

Moss, a seemingly humble plant, grows on the side of the road, attached to the stone, stepping on the foot, seemingly nothing. When they appear in pieces, there is a sudden shock, so low-key, but can turn into a unique spectacular^[1].

In addition to moss and flesh and some small green plants, can be used as a micro landscape.

1.1.1. Combining different green plants and different small objects will have different visual effects.

The fleshy micro-landscape is the most common on the market, mainly based on succulents, plus some ornaments or dolls, such as sandstone, placed in pots or fish tanks, combined according to aesthetic principles.

Secondly, there is a micro-landscape with moss as the main green plant. This is mainly bottled, but now there are many pieces that are combined with fleshy or small rich bamboos, plus ornaments, and can also be used as accessories for wind chimes.

1.2. The feast of visual senses

When you walk down the street, in the mall, in the flower market, see these things in the water bottle or in the fish tank, you will have to look a few more eyes, even stop for him, meet the DIY storefront. It is possible to try the pleasure of this production in person. If you are a plant enthusiast or a psychologist, you will definitely understand the mystery.

When you get home one day when you are tired, sit on the sofa and look at the bottles and cans on the coffee

table. You will feel comfortable and relax your nerves and meditate on the story in the bottle. What kind of it is? Visual experience, magical.

1.3. Preserving the beauty of reality or the illusory dream

Now that technology is very developed, when you go to different cities and look at different scenery, you can use the camera to record where you are going, but don't know if you have found a problem when you don't have a SLR camera. At the time, or when the SLR lens is not very high-end, you will find that the scenery you shot is really different from the camera resolution. What can we do?

With our magical micro-landscape record, you can let the master help, you can also buy the materials yourself to make, this is a process of exercise and enjoy. Not only can you use physical imitation, you can also incorporate your own virtual scenery, which is in the psychological counseling room, but they are using sandboxes, we use bonsai, but there are many similar places. Through your design, you can also speculate on your inner world, so to a certain extent, the micro-landscape is not only a great accomplishment in viewing, but his effect is also very powerful.

2. Practical Effects of Micro Landscape

People who are filled with childlike tendencies often have a small world of their own fantasy. The micro-landscape uses simple soil, plants and containers to turn this ideal into reality. As long as the method used is correct, he will become a tiny world that can cycle and live independently. And we can open the bottle from time to time to ventilate the plants and take a closer look at this small world that I have carefully crafted.

2.1. Flexible and versatile applications

The reason why it is called the micro landscape is that it is small enough to be placed on the bookshelf or on the table in the office or at home. People are now paying more and more attention to the quality of their home and office environments. In the process of home decoration, adding some green elements can not only beautify the role of the room, but also adjust the mood and relax the spirit. It also improves the air quality in the room. Make people in this space feel good and healthy. It can be said that it is more than one thing.

2.2. Unexpected efficacy

People's living standards have also improved the decoration of the home. Although it is now advocating the use of new non-toxic and harmless building materials. However, there will still be some products whose quality is not good enough to endanger people's health. However, some plants are very resistant to viruses and can absorb toxic gases like formaldehyde sulfur dioxide and hydrogen sulfide from the air. Many succulents also have the ability to absorb radioactive substances and also convert substances that are harmful to the human body into oxygen. You can put a pot of succulent micro-landscape on your desk, in front of the computer, relieve eye fatigue when you are tired, let yourself relieve the pressure on your work and let the nervous nerves relax properly. why not? There are even some volatile oils from flowers that can kill bacteria floating in the air and keep the air inside the house clean.

After carefully caring for the micro-landscape plants for a while, you will find that your aesthetics will change slowly, and your quality of life will improve.

2.3. feel at heart, fun to come

The design of the micro landscape is inspired by the bit by bit. The excitement of parents at the beginning; the mixed feelings of big and big backwards; the happiness of the children and grandchildren. One scene and one

thing are all housed in a small landscape. Just like the classics in the book. The memory is thus saved.

Art is amazing. A variety of micro-landscapes and green plants echoed, the farmers in the bottle in the spring; the children in the bottle; the golden wheat in the bottle; the dry branches in the bottle. It makes people feel like they have finished their lives in the daytime. How can we feel bored when we are in such an environment?

3. Conclusion

The micro-landscape is also functional while being ornamental. The micro-landscape can enrich the interior space and create different artistic conceptions. The moss and the plants are skillfully combined and placed in a small container to convey different charms to people. The micro-landscape is taken from life and comes from fun. One flower, one tree, one thing and one joy can be recorded in it. Nowadays, people have added more benefits to the micro-landscape, so that they can not only satisfy people's artistic pursuit of the city's furnishings, but also be more conducive to good health. Planting different kinds of plants together, we must consider whether it will be gram, whether it will produce toxins, and the same, there will be mutual birth, which will promote. Use this to create a more valuable micro-landscape that makes the micro-landscape more meaningful.
