Abstract: Since our country in higher education basic law course, law into the college's ivory tower, brought another concept edification for their God's favored one. As we all know, the importance of the rule of law has been paid more and more attention by college students in the past ten years, and the rule of law has formed a consensus among college students. The understanding and grasp of legal knowledge are more rational. But at the same time, the legal education in the campus has made great achievements, while the awareness of legal knowledge of college students is still low, and the legal awareness is still poor. This paper systematically studies this phenomenon from the deviation characteristics of College Students' legal consciousness.

Keywords: Deviation Characteristics; College Students' legal consciousness; Higher education

1. Introduction

The legal consciousness of college students refers to the reflection and understanding of the special group of college students to the law, and it is the expectation of college students for the sense of fairness and justice. College students are a special group in society. Compared with the legal consciousness of other social groups, the legal consciousness of college students has the following characteristics [1-6].

The hierarchy of College Students' legal consciousness refers to the different grades and majors of college students, so they have different levels of legal consciousness and show certain levels [7-9]. According to the requirements of the Ministry of education, college students in the grade two generally systematically learn the knowledge of law, most of the students learning purpose is clear. In the studying process, the majority of students can fully understand and grasp the basic knowledge of law, improve the legal knowledge of some of the students also has the ability, ability to use legal knowledge and theory to analyze and solve problems, the legal consciousness has a higher level [10-13]. But there are still a part of the students, because there is no set clear learning objectives, in legal education, the degree of participation of the mind is very low, the teacher lectures, but he was thinking of something else, nothing, even absent, this part of the students can not be fully and correctly grasp the basic knowledge of law. Students in the ability to understand and master of law degree of emotional color darker, less rational, students' knowledge of the law is obtained through many experience in social life, the news media reported in reality and a case of understanding, more is to evaluate whether the fair use he confirmed the hearts of moral values, to deduce whether the legal justice, which will inevitably one-sided, so this part of students' legal

consciousness will be in a relatively low level. In addition, due to the different majors of university students, it also leads to the hierarchy of their legal consciousness. The legal consciousness of students majoring in law is obviously better than that of other majors.

2. Contradictions

The legal consciousness of college students has some contradiction on the whole. On the one hand, college students are very concerned about the legal construction of our country, showing the urgent mood and strong desire to speed up and improve the legal system construction, and also recognize that the legal system construction is a long-term process of development. College students in the real life through the acceptance of law education to a certain extent, the basic spirit of the socialist rule of law and requirements, the current law on the protection of people's lives and other issues generally held a positive attitude to recognize the social value of the law. But on the other hand, sometimes some students remain indifferent and extreme attitude towards the legal system of our country, even doubt and distrust the legal system of our country. For example, some students believe that "everyone is equal before the law" can not be realized in reality, China's current democracy and legal system construction has not made much progress, and the situation is very poor. This kind of understanding and attitude is easy to make college students estranged from the rule of law, and even fear of the law.

3. Imbalance

The imbalance of College Students' legal consciousness is mainly manifested in the first, the constitutional awareness of college students is weaker than the legal consciousness of the department. Constitution is the fun-

damental law of the country, and occupies the core position in the legal system, and the constitutional consciousness should be in the core position in the legal consciousness system. However, college students' interest in and learning about the constitution is generally lower than the law of the department. Because they are not interested in learning the constitution, it is difficult to grasp the basic spirit and basic knowledge of the Constitution in a comprehensive way, and it is impossible to have a strong sense of the constitution. Second, in the specific department law, college students' awareness of civil law, economic law consciousness, criminal law consciousness, marriage law consciousness, inheritance law consciousness are generally higher than the administrative law consciousness. In the minds of college students, a considerable number of students believe that administrative law has nothing to do with themselves, only related to the administrative organs, they are concerned with the market economy and their vital interests are closely related to the law. Third, college students' awareness of substantive law is generally higher than that of procedural law. The procedural law is the law to solve the legal procedure, and the substantive law is the law to solve the substantive issues such as the attribution, size and so on. However, when students encounter the violation of their own interests, they have not enough knowledge of the legal significance of the proceedings and the legal significance and social significance of participating in the proceedings, and some students can not make full use of legal weapons to protect their vital interests.

4. Development

College students are people who have received higher education, generally have higher cultural knowledge, of course, also have a certain legal knowledge. After many years of higher education, college students' understanding of the society has a unique perspective, but because of college students in a large part of no actual contact with society, lack of social experience, so the knowledge and the teacher teaching content and daily life what one sees and hears life has a great influence on the. Students of the physical and psychological stage is the world outlook on life maturity and perfection period, this time on the one hand, some students on the phenomenon, including legal phenomena have their own understanding and the understanding, but also has very strong plasticity and development, the social influence and school the education will be the healthy development of College Students' legal consciousness plays a very important role.

5. Concluding Remarks

The development of College Students' legal consciousness also implies the significance of this, with the improvement of College Students' social experience and the national legal system and the legal system of College Students' understanding of the law will gradually from obedience to belief, this evolution is the law belief of college students and the legal consciousness of the casting process, at the same time
