Abstract: The school is a planned and organized organization for systematic education. A purposeful, systematic and organized social activity that affects the physical and mental development of the educated school as a direct goal by full-time staff and specialized agencies. Schools in our country carry out the educational policy and policy of the party and the state in an all-round way, unite and rely on the staff and workers, play the leading role of school education, and strive to promote the coordinated development of the school, family and society, and form a good educational environment.

Keywords: University education technology leading role

1. Introduction

The school organization is organized by education system. Borne by the full-time staff and specialized agencies with the goal, system, organization, education and school education to influence the physical and mental development is the direct target of social activities [1-3]. Our school is a comprehensive implementation of the party and the state's educational policy, unite and rely on the broad masses of staff, to play a leading role in school education, to promote the coordinated development of three-in-one schools, families and society to form a good education environment. In a sense, what kind of school, what kind of talent [4-7]. To promote the smooth realization of the reform, and achieve the best performance of the school management, you can use the following strategies:

School to have a lot of modern ideas and modern consciousness and skills of management personnel. For the leadership and management of the school, the first is the leadership and management of ideological education, followed by the leadership and management of administration. Managers do not understand the modern educational technology, do not recognize the superiority and necessity of modern education technology, it cannot support the school promotion and use of modern educational technology, so a modern educational technology idea armed mind management team, is the premise of education reform and the selection condition. Secondly, to the national education policy, to the rules and regulations of the school, the final is to rely on teachers to implement and reflect, so a good grasp of modern educational technology of teachers is particularly important. The school is crowded, interpersonal communication are frequent place

for teaching activities. Nature will form a kind of campus culture. Rich in nutrients to grow a good campus culture for the development of teachers and students to provide, provide fertile ground for the development of classroom teaching culture.

2. Management Application of Modern Educational Technology

In the distributed application, it can be divided according to the geographical area to form the administrable cell cluster. In the cluster, the reputations of the ordinary institutions are centrally managed by a trust management institution G, which maintains the reputation of the institution according to the reports of the institutions in the cluster. While the ordinary institutions decide whether to authorize the reader, reference to the reputation value of the institution released by G.

To strengthen the information construction and management. Of course, the informatization construction includes construction of modern education technology, it is a prerequisite for the construction of modern educational technology, because many of the elements of educational technology are needed to support the construction of informatization. Information construction investment is huge, the informatization construction is updated quickly, so to rational planning, staging. The school should strengthen the investment in informatization construction, determine the informationization construction stage goals and long-term goals, not only focus on the hardware investment, but also pay attention to software construction, pay more attention to the information of the personnel training, a solid foundation for modern educational technology. Information technology can make the teaching break through time and space constraints, but also make

the school education and management mode of new change. Management should adapt to the information, the use of modern management tools and management concepts. The development of modern educational technology, also has a huge impact on the traditional mode of school management, school to strengthen school management full use of modern educational technology, and realize the modernization of management technology. But the management should pay attention to people-oriented, not a mechanical cold management, information technology as a means, do not rely solely on technology.

3. The Multimedia Application of Modern Educational Technology

The people-oriented, create a harmonious education environment. Now engaged in the education of teachers are very hard, great pressure, the school should put teachers in an important position, concerning the teacher's well-being, understand the teacher, believe that teachers, support teachers. Modern educational technology should be teachers to improve classroom teaching efficiency, teachers and students of physical and mental liberation to help, and not become a burden and pressure of the formalism and the traditional mode of classroom teaching, should provide teachers with a sufficiently large stage, let them in the work of self play, freedom of choice, naturally and easily play their greatest ability the. The school should establish service respect for the students, the students thinking, by means of modern education technology, to provide convenience for the teachers and students in all aspects of teaching, learning and growth should be all in order to serve students, but not that modern education technology has become the students learning to adapt to the confusion and obstacles. The school to achieve this effect in the management of the school, so that teachers and students as their warm homes, the educational technology as a teaching assistant and partner conditions.

Before the authorization of the reader, it is necessary to examine the trust of the institution that the reader belongs to. The trust of the institution is stable, and it can be obtained by the evaluation of the third party to its reputation value, and is mainly implemented in the institutional layer. Considering that the number of the institutions is far less than the number of the readers and tags, and at the same time, there often exist entities in the institution, which is stable. Thus, the trust management based on the trust management institution is proposed.

To establish and perfect the reasonable and effective incentive mechanism, establish and improve the incentive mechanism of material incentive and spirit incentive to combine the. The significance of the incentive mechanism has the value orientation of classroom teaching culture. The teachers and students respectively to establish reasonable and effective incentive mechanism, encourage innovation and reform of teaching, encourage the use of new technology under the condition of modern education technology means, encourage new teaching practice theory, encourage the teaching reform and exploration. Encourage the development of students' personality and all-round development, strive for up to the maximum extent to meet the reasonable needs of teachers and students, teachers and students work enthusiasm and motivation and learning. Ultimately promote the benign development of teaching, teachers and students to form a good Teaching benefits teachers as well as students. classroom teaching culture.

4. Conclusion

Insist on exploration and innovation. The development of the society is not stopped, the development of information technology and modern education technology is the field of education will inevitably lead to change rapidly, various aspects of change and development. The school management work should emphasize the spirit of exploration and innovation, and strive to innovation education management and teaching activities to. The only way to school with vigor and vitality and to be angry, life and growth in nature, dynamic characteristic. Can we really face the modernization, facing the world, facing the future.
