Abstract: The development of the information age has put forward new goals and tasks for all walks of life. Informatization promotes the management mode of University library. This paper analyzes the innovation of management mode of University Library from three aspects. First, this paper analyzes the promotion of University Library in the information of the hardware update; second, we need to use analytical technology; finally, we will need information management and library education function combination. This article is intended to contribute to the innovation of the management mode of University Library in the new era through the beneficial exploration and discussion.

Keywords: University Library; Information management; Quality; Approach

1. Introduction

With the development of the times and the progress of the society, the University Libraries in our country are facing the need of transformation and upgrading. Under the background of the information age, the university library should pay attention to the realization of its function, and pay attention to the innovation of its management mode. On the one hand, it can improve the management level of university library, on the other hand, it is also helpful to improve the learning efficiency of students in the school. In order to keep up with the development of information technology, the management of university library should be adjusted from the following aspects.

2. Updating the Hardware of University Library

In order to improve the quality of library information management, we can consider updating information related hardware. This can create a good learning environment for students. So we need to increase investment in the promotion of library management, while strengthening the transformation of information. In the process of transformation, we need to focus on the actual needs of students, while the addition of computer inquiries, open up the online seat selection channel, etc.. This requires the management of university library staff to seriously manage the situation of the use of computers, but also need to be adjusted after careful observation.

Colleges and universities are an important part of our education system. The ultimate goal of university management is to serve the needs of the market. Here we talk

about market demand, in fact, refers to the high-end labor market. From the point of view of the overall function of education and teaching in China's colleges and universities, colleges and universities have been playing a relatively special role in China's overall higher education system. Compared with the traditional research universities, the aim of colleges and universities is to cultivate high-quality skilled talents with practical ability. In the enrollment situation, different institutions will recruit students at all levels. Research universities are more likely to recruit students who have a relatively good personal performance in the early high school. This is because the rich knowledge of students into the school can be more easily after the more profound theoretical study. But colleges and universities in the process of enrollment is more inclined to develop and recruit those who do not have a talent in the theoretical study of students.

This study emphasizes to update the library hardware facilities does not mean blind investment, but in respect of students' learning habits and create a good learning atmosphere, on the inside of the library service work accordingly. For example, you can provide lockers for students, especially taking into account the situation in northern winter students wear more heavy. A lot of students in the library is relatively small position can not be ranked in their own things. Because the scope is too crowded to produce the contradiction between the students, even the quarrel happened. This will affect the learning state of the students themselves, so we have to face and solve this problem. In order to solve this problem, the library can consider investment funds to update the existing hardware facilities, such as setting electronic

lockers, this can be for those students who need to provide a store their goods.

3. Pay Attention to the Construction of Soft Environment of Library

Using the high technology to rebuild the soft environment of the library is an important step to improve the quality of information management in University library. The information technology can provide more paths and methods for the management innovation of the library, such as self borrowing platform development, online library search and renew procedures etc.. All these can improve the management efficiency of university library, and colleagues help to reduce the working pressure of Library staff. Here we talk about building a soft environment, in fact, is to provide students with more learning related services. For example, each library has opened the closed ring, and the ring time is often late. At this time, even if a lot of students do not fall asleep in a sleepy state, if a sudden appearance of a more strident bell will be likely to frighten students. Medical research has shown that a sudden, harsh tone is a very negative stimulus to a person's heart and brain. In the long run will have a negative impact on the health of students. So the school library management personnel in the service of the students when considering computer music playback control to replace the closing bell, and also considered a gradual process when playing songs. The best in the process of playing the volume of the song will be gradually enlarged, which allows students to have a mental and physical space to adapt. Colleges and universities in the process of training students, pay more attention to the students' practical ability and practical ability training. With the development of the times and the progress of the society, the labor market is becoming more and more complex and complex. Therefore, a student in order to have a better performance in the future workplace needs a certain degree of learning ability, but also requires a certain degree of theoretical construction and the accumulation of certain knowledge. The establishment of university library is to provide a place for students to study in Colleges and universities, as well as to provide a safer environment for their practical study and theoretical study. In essence, the ultimate goal of the university library is to help students improve themselves at a higher level, while helping them to learn and work in the future there is a better accumulation of information. And then lead them to better performance in the workplace.

Each school has a different function, especially for colleges and universities. Most of the students studying in Colleges and universities are out of home state, so they need to complete their own basic necessities of life in the campus and learning and so on all aspects of things. Students in the bedroom to complete most of their life related things, while in the classroom to complete their

own learning and most of the things. However, the positioning of the library is more special, the time of the students in the library is relatively free, and can be controlled by their own. However, the function of the library itself is reflected in the fact that it provides students with a quiet learning environment and reading environment. The atmosphere of the school library determines the academic atmosphere of a school. If students do not have a good state of study in the library, for example, most of the students are eating and playing in the library, which will result in the lack of academic.

The construction of the library is one of the most important parts in the construction of the school and the city. The cultural function of the library is very important for the construction of the whole environment. If the library has a good environment, it will provide readers with a good atmosphere for learning and reading. On the one hand, it can help improve the learning atmosphere of the school, but also can help students better into the study.

4. The Combination of Information Management and Library Education

At present, the third path should be the combination of information management and library education and teaching functions. Library staff should pay more attention to the demands of students. The staff can browse through the students' online message and use the online questionnaire survey and other methods to learn the students' learning demands in a certain period of time. After collecting this information, managers can focus on the reality of these lectures organized activities. Library can carry out a variety of activities to enrich students' after-school life. On the one hand, the library is a place for learning, and the library has become a place for academic exchange. In fact, the construction of the general office is to provide a platform and opportunity for academic exchanges between students and students to participate in lectures. The libraries of colleges and universities should pay attention to the construction of the service for the students. Here we refer to the library should carry out a variety of activities is that colleges and universities should be based on their own characteristics of personnel training. The school must not be too much emphasis on training activities in the process of inviting celebrities in the organization, this is because the students from the university itself level view, their knowledge and skills are not need too high theory, but those in their life or personal growth will help enhance the professional skills of the lecture. Therefore, the library staff in Colleges and universities to invite experts and scholars to exchange and access to the school must be based on the actual characteristics of the University itself.

One of the most important functions of the library is to provide students with more services. Some students have limited economic ability, and these students often have

such and such difficulties when they choose to read independently. Therefore, the school library in order to strengthen the service should also consider increasing investment in the purchase of electronic literature. This can provide students with a better learning environment and reading environment, but also provide students with more opportunities to read.

Improve the quality of information management of university library, its importance is reflected in it can help the school to enhance the reputation, and help to carry out the enrollment work smoothly. With the full liberalization of the education market, various types of colleges and universities have sprung up. This leads to the face of the fierce competition and heavy resistance in the enrollment of colleges and universities. How to make their own hardware and software environment to meet the requirements of students and parents is the leader and operator of colleges and universities have been thinking and exploring problems. Strengthen the service of university library, which can create a good learning atmosphere for the entire high school. This is also one of the most important magic weapon for students and parents.

The emphasis placed on the electronic literature does not mean that the school is going to buy a large amount of literature, but the need for communication and communication between the relevant staff and students through the library. Schools need to be based on the ultimate goal of personnel training in Colleges and universities on the market to have a large volume of literature screening and selection, and its efforts to provide students with better books and documentation services. This allows students

to really benefit from the books and documents provided by the school.

5. Conclusions

In the information age, the innovation of the management mode of the university library is a process of using the modern way to improve the work level of the library and improve the service level for the students. The development of information technology has brought a lot of convenience to people's lives, so we need to make full use of information technology to improve the hardware facilities of university libraries, and strengthen the soft environment construction of the library. This is the current university library workers and the overall management in the promotion of the work should always uphold the idea.
